

FOR IMMEDIATE RELEASE

October 20, 2015 – ORLANDO, FL – AGC BIMFORUM – Hewlett Packard (HP) and The Associated General Contractors of America (AGC) announce that they are working in partnership, through innovative technology and sharing best practices, to enable AGC members to meet the challenges of the Architectural, Engineering and Construction (AEC) industry.

AGC and HP join forces to provide solutions to contractors.

With more than 26,000 member firms across the United States, AGC brings a full range of services to professionals in the construction field. With AGC, contractors find suppliers and services to boost their business, learn about industry trends, and connect and interact with peers. AGC also provides insights in the latest technologies, such as HP Large Format Designjet Printing Technology, to improve contractors' workflow and collaborations throughout the building process.

HP offers innovative technology to fulfill the printing, scanning and copying needs of professionals in technical markets including construction. HP Designjet Large Format printing solutions help produce high-quality B&W and color drawings and renderings at low cost. HP Designjet printers also provide unattended printing, enable more applications and incorporate mobile capabilities.

"AGC places a lot of value in our collaboration with HP for developing effective technologies to help our community of contractors in the office, as well as on the job site." said Jeff Wilson, Chief Marketing Officer at AGC.

The AGC BIMForum conference gathers AEC professionals to explore new trends and the most relevant technologies in their industries. This event offered the perfect venue to announce this new relationship. In this digital context, paper remains relevant and has a distinctive role as an effective, and often times required, communication medium.

"Using the HP Designjet MFP, new plans were available for the daily visit of the city building inspector," said area superintendent, Chad Neukirch at Hensel Phelps, a long standing AGC member firm. "Clear work sequencing charts provided an open view of what each subcontractor was supposed to do, when and where. This eliminated confusion and time consuming discussions about who was meant to be working in an area."

HP is committed to the construction market and continues to reinvent technical printing. The joint collaboration with AGC will go well beyond products and services, with both organizations working together to educate and enable AGC members to meet the challenges of the industry today.

About HP

HP creates new possibilities for technology to have a meaningful impact on people, businesses, governments and society. With the broadest technology portfolio spanning printing, personal systems, software, services and IT infrastructure, HP delivers solutions for customers' most complex challenges in every region of the world.
